Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to a nylon zipper including a concave portion on each gripping element, classified in class 24, subclass 396.
- II. Claims 5-8, drawn to a threaded rod device for forming concave portions and convex portions on nylon gripper elements of the fastener structures of a nylon zipper, classified in class 425, subclass 391.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the product as claimed can be made by another and materially different apparatus such as an injection molding apparatus that forms each gripping element of the zipper with the seaming wire already placed positioned in the apparatus prior to injecting the nylon so as to be embedded in the concave portion of the gripping element formed when nylon is injected into the mold that has a part to form the concave portion of the gripping element.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3677

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
